7. CONCLUSIONS:

All environmental fate data requirements have been satisfied (for a summary of the data see earlier EAB data reviews of June 21, 1985 and August 83, 1984).

The incremental environmental risk associated with this added use should be minimal. However, if other Branches in HED have concerns with this added use (such as RCB), then other data may be needed.

8. RECOMMENDATIONS:

EAB concurs with the proposed amendment.

9. BACKGROUND:

A. Introduction: RONILAN is currently registered for use on various crops. The present submission is to add use on peanuts and beans.

B. Directions for Use:

Vinclozolin (the active ingredient) will be applied on beans at the maximum rate of 4 lb/acre/season. On peanuts the maximum application rate is 6 lb/acre/season (note attached label).
